Assistive Technology-Introduction-1

<https://youtu.be/9yLZRPXl8lq> Electromechanical Braille

How to Teach-Instructional Routine?

Assistive Technology-Analysis and Evaluation-3

Components and Function (what it's used for)	Pros	Cons	Resources (citations)
A Refreshable Braille Display provides information on a computer screen by raising and lowering pins that create braille in Braille. It can show up to 80 characters and changes on the user moves the cursor on the screen. The Refreshable Braille Display gives access to legally labeled users and provides direct access to information.	Some strengths of the Digital Braille display are it can show many colors, allows readers to search up key words, and makes it easier to find a certain page. It is also very portable which allows people to read on their device anywhere and anytime.	Some of the braille display pins produce sound when the screen is moved. Sometimes users get out of sync and it may not be as accurate. This may interfere with the readers comprehension. When using a braille printer, the reader must overcome the obstacle of reading speed. The pins may get dirtier over a long period of time if used.	Coulter, Christian. 2015. "Digital Braille Versus Paper Braille". https://www.digitalebraille.com/2015/06/25/digital-braille-versus-paper-braille/ American Foundation for the Blind. 2020. How to Teach-Instructional Routine?

minutes	The Reading Comprehension Strategy Chosen: What, So-What, Now-What Assistive Technology: A Braille Printer
g comprehension strategy	<ol style="list-style-type: none"> Adam will read the passage: "Aiding the Visually Impaired: Developing an efficient Braille Printer." He will use A Braille Printer to feel the words on the page that will help him comprehend the article. Adam will read the passage without stopping one time. After he reads the passage fully through one time, he will then start to reread the article while keeping the following questions in the back of his mind. (As he is reading, he can write down possible answers that come to mind while using his Braille Keyboard that is connected to his computer, where he originally printed off the article.) <ol style="list-style-type: none"> The following questions he will need to think of are <ol style="list-style-type: none"> What specific points stood out to you while reading this article? (WHAT) Why was it important to read this article? (SO WHAT) Now what are the take aways from reading this article? (NOW WHAT) He will complete a worksheet with those following questions on it, using the same method of typing his answers out using his Braille computer. Adam may reread any part of the article he needs until the assignment is completed.
re of the assistive technology options that learner's access to the material	<p>Interaction with Student:</p> <p>Hello Adam! Today I will be working with you one on one and we will be testing out your new Braille Printer. I have a special article that explains to us how the printers have evolved over time. We printed the article off for you to read with Braille and there's a worksheet to complete after the reading. Let's start off by having you read the article one time through to me out loud. "Adam reads the article once" Now let's slowly go through the article again while thinking about the worksheet questions. "Adam will read through the article again one more and tell me What stood out to him the most, Why was important that he is learning this, and What are his takeaways from reading this?" Great work Adam! Now we both know more about how Braille Printers work and why they are so important for us to use in our classroom.</p>

Instructional Routine # 1-Exception Words

R

After studying this module, take exit slip quiz #1

[Exit Slip-Routine # 1](#)

What are exception words?

C

Words that do not adhere to the phonic rules of spelling are referred to as exception words. In the word 'action,' for example, the sounds /shen/ are spelled 'tion.' Here are some more exception words:

there where path bath hour sugar length mention minute rhyme rhythm shoulder signature soldier stomach sufficient temperature thorough twelfth yacht

Are exception words and sight words the same?

Words that appear frequently in texts are known as sight words. We want young readers to recognize these words quickly so that they can concentrate on difficult words and reading comprehension. Because they appear frequently throughout the text, exception words can be treated as sight words. There are, however, far more regular (decodable) sight words than exception sight words.

It should be noted that this routine is only for teaching exception words. A different routine is used to teach regular words.

Which exception words should I teach?

To begin, have your student read a list of exception words of increasing difficulty. Then ask them to correctly spell the words they read correctly. When a student makes four consecutive reading or spelling errors, you should stop the evaluation. You can use the list attached to the working link below, or you can ask the student's teacher if he or she has a list of exception words that they want their student to learn. It is important to note that for this drill, the words must be exception sight words rather than regular sight words. Make a folder for each student in which you can keep a list of the words that he or she needs to learn.

Consonant Digraphs-Game

Consonant Digraphs
Krista & Paige

Student 2 Consonant Digraphs

- Student 2
- Age 7
- Read Level: 1st grade
- Reading: fiction, non-fiction
- Reading at this level: Reading Consonant Digraphs (c, d, k, g, ch, sh, ck, qu, ph, qu, ck, qu)
- This book will be used to teach the student to recognize and use the consonant digraphs in any grade 2 book. They will be able to recognize and use the digraphs in any grade 2 book.
- This book includes a list of digraphs and a list of digraphs that appear in the correct order. This is provided for the student's reference.

Student Feedback on Their Gamification Experience

Question 5 1 / 1 pts

Outline 3 things you liked about creating this instructional game

Your Answer:

- 1) I like that you provided us with examples/instruction videos before we worked independently. It was very helpful.
- 2) I feel that using online instructional game is fun for both the teacher and the student.
- 3) It gave me ideas for my future classroom.

Additional Comments:

Question 6 1 / 1 pts

Discuss three ideas for the instructor to improve the learning experience associated with the instructional game that you have created.

Your Answer:

There aren't any improvements that I can think of that need to be made.

Question 5 1 / 1 pts

Outline 3 things you liked about creating this instructional game

Your Answer:

Learning to use the interactions in google slides gonna definitely use that in my own classroom. Games are the best way to review.
It was fun making the game itself.

Mike mostly had the game and words outlined I did the tech stuff in the background mostly.

Additional Comments:

Question 6 1 / 1 pts

Discuss three ideas for the instructor to improve the learning experience associated with the instructional game that you have created.

Your Answer:

Google slide interactions are definitely great if you have the time.
Use kahoots more there definitely fun.
To be honest there are virtually million of tools the problem is finding good solid ones. To be honest the way you teach is fine I am learning 95%-99% percent the information just fine with a few clarifications here and there.

Question 5 1 / 1 pts

Outline 3 things you liked about creating this instructional game

Your Answer:

1. I liked exploring the interactive templates Google has to offer. There are many other opportunities outside of the typical Google Slides format.
2. Another thing I enjoyed was incorporating student interests into the game. Our student was interested in animals, and there were lots of visuals we were able to insert into the game. Additionally, I had fun brainstorming animal names that contained consonant digraphs.
3. Finally, I appreciated that we were able to work collaboratively to complete the instructional game. Both Krista and I had great ideas that we could bounce off each other. It was fun to see the final product we were able to make.

Additional Comments:

Question 6 1 / 1 pts

Discuss three ideas for the instructor to improve the learning experience associated with the instructional game that you have created.

Your Answer:

1. I think it would be beneficial for us to dive into different interactive platforms prior to the assignment.
2. It would be a great idea to have us share our discoveries to the class so that we can see the various interactive opportunities that are out there.
3. Maybe we could incorporate more instructional games/interactive activities into our own classroom instruction for more exposure.

Question 5 1 / 1 pts

Outline 3 things you liked about creating this instructional game

Your Answer:

1. learning different sources that we can use in the future
2. Learning new websites and tools to use
3. it was nice to work in a team and see what they knew as well

Additional Comments:

Question 6 1 / 1 pts

Discuss three ideas for the instructor to improve the learning experience associated with the instructional game that you have created.

Your Answer:

More information on what we are doing
Give an example
Overall I liked it and it went well

Question 5 1 / 1 pts

Outline 3 things you liked about creating this instructional game

Your Answer:

I liked that we had to find new ways to create the instructional game and that we got to work in partners so we could use each other's knowledge about different games. I also liked that we went over some ideas in class so that we had a basis to start from.

Additional Comments:

Question 6 1 / 1 pts

Discuss three ideas for the instructor to improve the learning experience associated with the instructional game that you have created.

Your Answer:

I wish we could have shared our projects so we could see what other people created, and that way we could have more ideas to use in the future.
